The Environmental Unit (EU) will inspect the sewer line at the same time the Septic Final Inspection is conducted. The inspection will include the following items:

- **2 way clean out:** Placed within 24 inches of the structure or the edge of porch so as to be accessible. Bullhorn or single two-way fitting are acceptable.

- **Pipe Material:** Pipe must be stamped APPROVED for DWV (Drain, Waste, Vent) - it comes

- **Pipe Slope (min and max):** 3” pipe = ⅛” per foot. 4” or greater pipe = ⅛” per foot.

- **Pipe Depth:** The pipe must be a minimum of 12” below finished grade.

- **Shading:** 6” of approved shading below and above the pipe which is fully supported. Sand, AB, dirt sifted to remove all rocks greater than ¾” diameter are

- **Tracer Wire:** 18 AWG green insulated tracer wire must be installed from the clean out to the inlet of the tank. The wire is wound up the clean-out above grade a bit.

Call when BOTH the BUILDING SEWER line and the SEPTIC SYSTEM are ready for inspection

**928-771-3562 Prescott**  
**928-639-8137 Cottonwood**

Effective as of 7/26/2010 for newly issued permits only
